SUBMISSION - FNC Water Strategy

Hi there

My name is [REDACTED] and I have resided in The Channon for almost 13 years with my 2 children aged 17 and 13.

First of all I would like to acknowledge the work the DPIE have put into developing the FNC Water Strategy.

I would also like to ask that we do not rely on the proposed Rous Water Strategy with particular mention to the proposed Dunoon Dam, as I believe implementing alternative smart water management systems would be more effective for the below mentioned reasons.

They would have less impact on:

- Aboriginal Cultural Heritage Sites
- Residents in the area of Dunoon, The Channon and surrounds
- The Big Scrub Rainforest and Native plants in the area
- Native Species of wildlife, including our beloved Koalas and Platypus (which have already been significantly impacted in the area due to the bushfires in 2019)
- Wildlife habitat and corridors

I have to ask is there other ways that can that way be explored and implemented?

I would love for our environment to be kept intact for us and our future generations, the plants, the animals and our First Nation peoples to enjoy.

Please consider this.

Kindest regards

[REDACTED] (on behalf of my children)
