

Proposed amendment of the Darling Alluvial Groundwater Water Sharing Plan

Submission form

Office use only	Submission number
-----------------	-------------------

How to fill out this form

The department is seeking stakeholder views on removing subclause 37(3)(a) from the *Water Sharing Plan for the Darling Alluvial Groundwater Sources 2020*. This rule prohibits some aquifer access licence holders from taking water from the Lower Darling Alluvial Groundwater Source unless that water is used for perennial horticulture (orchards and vineyards).

A supporting Factsheet (*Proposed change to the Water Sharing Plan for the Darling Alluvial Groundwater Sources 2020*) provides background to the proposed change.

Send completed submissions to:

Post: Darling Alluvial Groundwater Sharing Plan amendment

Proposed amendment of the Darling Alluvial Groundwater Water Sharing Plan

Submission form

Proposed change to access rules for licences in the Lower Darling Alluvial Groundwater Source

Under the current plan, groundwater extraction is restricted for most aquifer access licences in the Lower Darling Alluvial Groundwater Source. These licences were issued to surface water licence holders, providing water to sustain orchards and vineyards when surface water was not available.

The restrictions apply to 10 of the 11 aquifer access licences such that water cannot be extracted unless:

- water is used for the purpose of perennial horticulture (subclause 37 (3) (a)), and
- any one of the following apply (subclause 37 (3) (b)):
 - an available water determination made for regulated river (general security) access licences in the Lower Darling Regulated River Water Source is equal to or less than 0.5 ML per unit share
 - an order under section 324 of the Act is in place prohibiting the take of water under a regulated river (general security) access licence in the Lower Darling Regulated River Water applies or
 - the flow in the Darling River at the Pooncarie (425005) gauge is less than 2.2 ML/day.

One licence has no restrictions, and 2 licences can use water for other, limited, purposes (cleaning fruit or animal pens etc).

Most licence holders have removed their perennial crops under an agreement with the Commonwealth Government. The majority of these licences can no longer be used according to the access rules of the water sharing plan.

Licence holders have requested that the restriction for watering perennial horticulture crops only, is removed from the access rule so that the water can be used for other purposes. No other changes are sought and groundwater access will still be restricted to those times when surface water is not available.

Do you have any comments on the proposed change?

The use of our bore has always and will always remain as an emergency back up in times of drought. It is expensive to operate, the flow rate is low and quality of water is often not ideal. This means that our preference will always remain to use available surface water first.

A bore that can be used in times of extreme drought provides a level of mental comfort, knowing that you can provide water for house and gardens and you can maintain some feed for livestock.

It provides economic security knowing that you have the ability to feed and water your core breeding stock. Use of these bores has no impact on other uses or neighboring properties and is very much seen as a last resort.
