supplies for regional centres, towns and communities in a changing climate	and floodplain ecosystems	Aboriginal people's water rights and access	Supporting agriculture and emerging industries	
Neither agree nor disagree	Neither agree nor disagree	Disagree	Strongly agree	There's nothing about building infrastructure that fixes all of your problems above. Every single flood you waste an opportunity to store enormous volumes of water that washes out to sea. Build more dams!!

You will need more water in the future not less. Your focus should be on providing more water to use not less. You're so blinkered into "clime change" you're missing the point. You need more water!				

Q15	Q16	Q17	Q17_1_TEXT	Q18	Q18_1_TEXT
<p>Climate and hydrological modelling</p> <p>The climate and hydrological modelling report presents climate and baseline hydrological modelling results under 3 plausible climate scenarios including: historical climate, long-term historical climate, dry future climate.</p> <p>Presenting these results for the</p>	Is there any additional information we could include, or different ways we could present the information	* Do you think the climate scenarios selected are reasonable? - Selected Choice	* Do you think the climate scenarios selected are reasonable? - No (please outline why not) - Text	* Would you like further information on a particular section or result within the climate and hydrol - Selected Choice	* Would you like further information on a particular section or result within the climate and hydrol - Yes (please provide the section heading, page

<p>NSW Murray and Murrumbidgee regional water strategies is intended to inform the community's understanding of the range of potential climate challenges the regions' water resources may face into the future.</p> <p>* Do you understand the details of the 3 climate scenarios?</p>					<p>number and reason/s why this information would be helpful to you) - Text</p>
<p>Yes</p>	<p>How can any reasonable person believe that the "dry future climate" is even a remote possibility. Surely a "wet future climate" is equally unlikely. There's no reason to believe that anything other than the historical climate (with some wet, some dry) is the most likely scenario. Surely a 20% decrease on average is far too extreme in such a short timeframe, there's absolutely no data to support such a drop in the next 50 years when no such trend has occurred over the last 50?</p>	<p>No (please outline why not)</p>	<p>See above. This is climate alarmism at the most extreme.</p>	<p>No</p>
