Subject: Summision FNC Water Strategy

Thanks you for listening to community concerns. I attended the Lismore meeting of DPIE consultation as a member of WATER Northern Rivers Alliance. I've been a member of Rous Water Future Water Strategy Project Reference Group 2010-2013. I have many concerns about Dunoon Dam bring proposed by Rous. Firstly I don't understand how in 2011 Cultural Heritage Impact Assessments stated that Wijabul/Wia-bal stakeholders did not want any disturbance of their sacred sites, the 2013 version of CHIR has a different outcome when local elders have not changed their option. I'm concerned that Rous is not listening to their community -when 91% of the submissions about Rous 2060 plans , did not want a Dunoon dam. There are many other options for us to have a resilient water provision, many are suggested in your strategy. I'm in favour of a group of water projects including water reuse, solar powered desal, improved efficiency ( more education, less leaks) and increased harvesting rainwater through tanks & storm water .

Our water services need to adopt 21st century water technology, including new water purification through carbon, not hang onto old, ineffective damn dams.

Sincerely,
