Subject: That damn dam

I am a resident of Ocean Shores, shire of Byron, and am very critical of the proposed dam project.

This dam obviously fails on three essential grounds;

Economic as it will cost a ton and give little return.

Environmental as it is another assault on our precious environment.

Social as it is not needed or wanted by the residents.

Water is a precious resource and the present system fails to make it such and the proposed dam makes it even less precious as it will be more abundant. The answer lies in wise catchment and WISE use by us, the users. Expensive water is good as it makes us aware that it is precious. Even more so when the process of creating the 'cheap' water by extending catchments and reservoirs carries huge costs for future generations and our precious land.

As someone more interested in 'a future' as opposed to a 'disaster', I urge you to stop this proposal now and begin to work with what we have.
