

About the Better Bidgee Program

The NSW Government is investigating a range of measures for the Murrumbidgee River system as part of rescoping the Yanco Creek Offtake Project. These measures are part of a new Better Bidgee program (the program).

Following the Murray-Darling Basin Ministerial Council meeting in April, Water Infrastructure NSW has rescoped the Yanco Creek Offtake Sustainable Diversion Limits Adjustment Mechanism (SDLAM) Project and investigated options that could be supported by the community.

Our focus over the past few months has been evaluating the years of community feedback regarding the need to improve connectivity, environmental, cultural and community outcomes.

We know that these issues can only be addressed by taking a holistic, system-wide approach to water infrastructure planning and operations, working in tandem with changes in water policy and strategy. We also know that feedback from our stakeholders and communities is critical to ensuring we progress the best options for delivering outcomes.

We have recently launched a major consultation and engagement program, which will enable us to work side-by-side with communities to investigate solutions to create a Better Bidgee. This is a shift towards beneficial outcomes for communities and the environment.

Options are currently being investigated by the project team, most of which are in the very early planning stages. Community feedback and input will play a crucial role in shaping which initiatives are progressed, and what these initiatives look like, to deliver a Better Bidgee.

About the proposed Cold Water Pollution initiative

[Cold water pollution](#) happens when cold water is released from the bottom layers of large dams into the downstream rivers during warmer months. It is one of the key factors behind the reduction in the range and abundance of native freshwater fish species in NSW. It is estimated that up to 3,000 kilometres of mostly lowland river habitat in NSW is affected by cold water pollution.

Cold water pollution negatively affects Australian native fish – it can reduce the growth of fish and even reduce their chance of survival. To mitigate its effects, the Cold Water Pollution initiative would install infrastructure, such as compressors, pipelines and diffusers at Burrinjuck and Blowering dams, two of the worst performing dams in NSW for cold water pollution, in order to destratify the dams and improve downstream water temperatures and quality.

Potential benefits

The Cold Water Pollution initiative would have a range of ecological, environmental and social benefits including:

- better water quality
- increased production of fisheries
- improvements in the recovery of native fish populations, including Golden Perch and Murray Cod

Better Bidgee Program

Addressing Cold Water Pollution

- greater social amenity of waterways (e.g. swimming, fishing, canoeing).

Location map

The locations of the proposed Cold Water Pollution initiative are shown in the map below.

Stakeholder engagement

Communities will be at the heart of the Better Bidgee program. We are committed to working in partnership to develop the program to deliver outcomes with broad community support.

We will provide numerous opportunities for local communities and stakeholders to have their say on the design of the program and throughout the development and delivery phases of any projects. This feedback will be a key input into decision making and will help shape the program's future design.

We are also keen to hear any alternative or additional ideas local communities may have to deliver economic, cultural and environmental outcomes for local communities and the environment across the Murrumbidgee River system.

Better Bidgee Program

Addressing Cold Water Pollution

We will be reaching out to local communities to discuss the proposed ideas making up the Better Bidgee program. Upcoming engagement and partnering opportunities will be listed on the [Better Bidgee webpage](#) and on our [stakeholder engagement page](#).

Engagement with First Nations people

We recognise and acknowledge the unique relationship and deep Connection to Country that First Nations people have as the Traditional Owners and First Peoples of Australia.

The wisdom and experience of the First Nations communities will play a critical role in informing the development and approach to the Better Bidgee program.

We have a dedicated engagement team who will guide our program engagement with these communities, and we look forward to working with them to deliver real, tangible and widely accepted outcomes.
