

8 May 2024

# Lachlan Regulated River Water Source

## Water allocation update

**General security (GS) licenses in the Lachlan regulated river water source have received an allocation increase of 6% of their entitlement.** The increment takes the combined general security account balance to 611 gigalitres (GL) or an average of 103% of entitlement. The improved resources have come from inflows and less-than-budgeted operation and transmission losses over summer.

This resource assessment is based on information to 30 April 2024. Any changes in resources from this date, including rainfall in recent days, will be captured in the next routine statement in June 2024.

### Current allocation

8 May 2024	Allocation Increment	Average Account Balance
General security	6%	103%

### Key information

- Carryover evaporation reductions have been applied by WaterNSW for Quarter 3 (Q3) of 0.56% to GS Hold (then Take) sub-accounts.
- The Water Quality Allowance (WQA) has been fully utilized this water year.
- The reduced maximum safe level of Lake Brewster (deemed full) remains at 79.5% of the full supply capacity while current repair work is being completed. For more information [click here](#).
- Initial work on Lake Cargelligo has been completed allowing a return to using 100% of the full supply capacity if required. The next phase of construction is expected to re-start later this year. For the project update [click here](#).
- The applicable account balances will be reset if all storages are deemed to be full (considers reduced full supply capacity where applicable), and inflows cannot be regulated, in accordance with clause 45(3) of the water sharing plan.

### Resource outlook for 2024/25

The outlook for likely 1 July 2024 water availability is based on several assumptions. Water users are advised that the forecast allocations are not certain, may change and should be used with caution.

- Water for all critical consumptive and non-consumptive needs including for towns, is secure for the 2024/25 water year.
- High priority water access licence holders including local water utility, stock and domestic, and high security can expect their maximum (100%) allocations on 1 July 2024.
- Conveyance accounts will be allocated in accordance with water sharing plan rules, commensurate with the opening balance in the relevant general security licences.

- Water held in general security accounts accrues on a continuous basis and is carried forward into new water year. The maximum volume that may be held in account at any time is 2.0 megalitres (ML)/unit share (200% of entitlement).
- General security users can expect full access to their carried over account water, but no new allocation will be announced on 1 July. Instead, the usual monthly resource assessment will continue, commencing in early July, and any new allocation will be announced in the routine allocation statements throughout 2024/25.
- General security carryover is expected to be over 50% of entitlement, therefore both the Wyangala and Brewster Environmental Water Allowances will be allocated 10 GL each. The water quality allowance (WQA) will receive 20 GL in accordance with the water sharing plan.

### Storage levels (as of 7 May 2024)

- Wyangala Dam is about 94% full – holding around 1,150 GL.
- Lake Cargelligo is about 99% full – holding around 36 GL.
- Lake Brewster is about 60% full – holding about 83 GL.

### Seasonal climate and streamflow outlooks

The Bureau of Meteorology’s seasonal outlook for May to July 2024 indicates that rainfall will likely to be below median across the catchment. Day and overnight temperatures are likely to be above median over the next three months for the catchment.

For further details: <http://www.bom.gov.au/climate/outlooks/#/overview/summary>

The Bureau of Meteorology also issues a seasonal flow forecast for the Abercrombie River that drains into Wyangala Dam (see the figure below). This provides a forecast of potential storage inflows. All forecast quantiles for total flow volumes from April to June 2024, except one, are a little higher than the historical flows, indicating slightly wetter than historical inflows are possible over this period. The graph from April to June 2024 is shown below, and updates can be found at: <http://www.bom.gov.au/water/ssf/#id=412028>.

## Lachlan Resource Assessment Data Sheet

<b>Resource Distribution (May 2024 to May 2026)</b>	<b>Volume (GL)</b>
Current and Future Resources <sup>(1)</sup>	1,498
<i>less</i>	
This water year (05/24 to 06/24)	
Planned Environmental Water balance <sup>(2)</sup>	6
Domestic and Stock, Town balance	20
High Security balance	26
Conveyance balance	0
General Security balance <sup>(3)</sup>	611
Evaporation from storage <sup>(4)</sup>	6
Rights, transmission, and operational losses <sup>(5)</sup>	50
Storage reserve for 2024/25 and 2025/26	
Planned Environmental Water <sup>(2)</sup>	60
Domestic and Stock, Town, and High Security <sup>(6)</sup>	112
Conveyance	33
Evaporation from storage <sup>(4)</sup>	109
Rights, transmission, and operational losses <sup>(5)</sup>	465
<i>equals</i>	
Surplus (or deficit) <sup>(7)</sup>	0

**Notes:**

- (1) End of April 2024 storage volume in Wyangala Dam, Lake Cargelligo, and Lake Brewster, and the planned minimum storage inflows and tributary flows from May 2024 to May 2026 and flows in transit if any. Also, this is net of 16 GL of inaccessible (dead) storage volume.
- (2) Water reserved for the Water Quality Allowance (WQA) and the Environmental Water Allowances (EWA).
- (3) The held environmental water (HEW) is estimated to be 132 GL of GS entitlements, prior to reconciliation of usage and net trade. These reported entitlements are managed by agencies holding environmental water accounts. They include the NSW DCCEEW – Biodiversity Conservation and Science Group (BCS) and the Commonwealth Environmental Water Holder (CEWH).
- (4) Evaporation loss from three storages is based on projected storage depletions.
- (5) The volume required to run the river to meet all non-licence-based demands and delivery overheads. This mostly comprises basic landholder rights, and transmission and operational losses under dry conditions. The volumes needed for the remainder of the water year and the future are based on the projected demands of respective periods.
- (6) Required volume to allow full utilisation of 100% allocation to these licence holders.
- (7) Surplus (or deficit) of water available after accounting for all commitments.

**Resource Distribution as at 30 April 2024**  
**Lachlan Regulated River Water Source**

**Allocations in 2023/24 for the Lachlan regulated river water source**

Date	License Category	Increment	Total 2023/24	Average Account Balance
1-Jul	Domestic & Stock	100%	100%*	100%*
1-Jul	Local Water Utility	100%	100%*	100%*
1-Jul	High Security	1.00 ML/unit share	1.00 ML/unit share*	100%*
1-Jul	Conveyance	1.00 ML/unit share	1.00 ML/unit share*	100%*

## Water Allocation Guide

The NSW Department of Climate Change, Energy, the Environment and Water published a series of guides to describe the water allocation methods for most NSW regulated river systems. The guide for this water source is available at the below link.

For further details: <https://water.dpie.nsw.gov.au/our-work/allocations-availability/allocations/how-water-is-allocated/resource-assessment-process>

---

## Further information

The next routine monthly water allocation statement for this water source will be published on **Tuesday 11 June 2024**.

Information on available water determinations and water sharing plans is available on the Department of Climate Change, Energy, the Environment and Water website: [Water \(nsw.gov.au\)](https://www.nsw.gov.au/water)
