Subject: Rain tanks in every dwelling, no dam .

I am writing to voice my opposition to Rous Water's proposed dam at Dunoon.

I have lived in the Northern Rivers on and off since 1991, which is about the time I first heard that many large dams in the U.S.A. were being decommissioned, owing to their inefficiencies, allowing the rivers to run freely and ecosystems to regenerate.

There are alternative ways to address our eternal problem of water scarcity in this dry continent. Rous Water must approach this problem as an opportunity to implement contemporary technology, involving and educating the public in water conservation and efficiency, water tanks are needed in every house and plumbing in new housing must meet the environmental necessity to recycle/reuse .

The environmental damage that would be done by this dam would be irreparable. There are multiple endangered species on the site. It's 2020 - the planet is roasting. Last year we burned like never before. We need all the trees - all the plants - all the koalas - all the animals - no more loss of habitat.

Do not allow this dam to proceed.

Thank you ,
